

Side View

The side view shows the arrangement of particles in the lattice. The lattice is composed of vertical columns. The leftmost column is a light blue grid. The subsequent columns are yellow with vertical blue lines. Red dots representing particles are distributed across the lattice. A dense cluster of red dots is visible in the leftmost column, and a more dispersed distribution is seen in the subsequent columns. The overall shape of the lattice is rectangular, with a slight indentation on the right side.

Top View

The diagram shows a top-down view of a rectangular area. It contains several rectangular regions defined by yellow and blue lines. A large central region is filled with a grid of yellow and blue lines. To the left of this central region, there are two smaller rectangular areas, one above the other, also filled with a grid of yellow and blue lines. A red diagonal line runs through the lower-left area. Red dots are scattered throughout the diagram, particularly concentrated in the central and lower-left regions.
